Career Objective

I am a Senior Android Developer and I am willing to craft solutions for premier brands. Continuously looking to work in new technologies. Looking to learn new and exciting stuff and collaborate with great teams

Experience

Senior Android Developer, Logicon

July 2018 – Present

- Used Kotlin & MVVM architecture to implement application features.
- Worked with management to set priorities for upcoming releases and define stories accordingly
- Worked with UI/UX team to refine app experience.
- Maintained Google Play store release cycles for Alpha, Beta and Production channels.
- Constantly refactored code base to adhere to DRY principle.

Android Developer, TechNerd

September 2016 – June 2018

- Created Apps from scratch and also provided services to already built ones.
- Worked on apps based on Android Things and standalone projects.
- Added automation script to reduce manual tasks that were required during day-to-day development.

Technical Skills

- | | |
|-------------------|--------------|
| • Java | • Coroutines |
| • Kotlin | • MVVM |
| • RxJava | • LiveData |
| • Androidx | • Room |
| • Socket.io | • VCS(Git) |
| • JIRA | • Retrofit |
| • Material Design | • Volley |

Education

Virtual University of Pakistan – BS(CS)

2014 - 2019

Notable Projects

- **EmergencMe**

EmergencMe is a public safety application that involves citizens through peer alert system. This application works on community based responses to an incident. Its available on store.

[Play Store Link](#)

- **Vflux**

Vflux is a video sharing platform that allows content producers to sell and distribute content through different payment models instead of relying on advertising as the only option to create profitable video channels. It's not on store still in development.

[Vflux Portfolio](#)

- **Echo**

Echo is customizable mobile application developed for restaurants where customers get to submit their feedback with the easiest to use experience on a device. It's not on store still in development.
